

ATO Partners | PRIVATE AI

— PRIVATE ACCESS FOR ATO PARTNERS AGENTS

Your Private AI Advantage

An isolated AI assistant, reserved for approved agents,
helping them research faster, prepare better, and follow up
with consistency, directly inside Telegram.

Product Overview & Platform Summary
Prepared for ATO Partners · 2026

WHAT IT IS

A private operating advantage for your agents.

ATO Partners Private AI is an invite-only, private AI assistant for approved financial consultants. Each approved agent gets their own isolated assistant, used directly inside Telegram, with no new app to learn, no dashboards to manage.

It is designed to feel private and considered, not like a public chatbot: agents apply, are reviewed individually, and are granted access to an assistant that is theirs alone. Their conversations, files, and workflows are never shared with anyone else.

Invite-only

Every agent is reviewed and approved individually. Access is deliberate, not open.

Isolated

One private assistant per agent. Data and history stay with that agent alone.

In Telegram

Delivered where agents already work. Nothing to install.

The website owns identity, approval, and access. Telegram is only the conversation channel. Access is protected by a daily usage allowance so every member's assistant stays fast and available.

WHAT YOUR AGENTS GET

A working assistant that knows the job.

Built around the five tasks that eat an agent's week. Not a novelty chatbot, but a genuine working tool.

Product research

Ask a plain question, get a straight answer. Compare riders, exclusions, and definitions in minutes, not evenings.

Meeting preparation

Brief yourself before you walk in: summaries of what matters for this client, this product, this conversation.

Client follow-up

Draft the recap, the reminder, the nudge, in the agent's voice, ready to send, before the moment goes cold.

Product knowledge on call

The details half-remembered at 9pm, answered precisely: clauses, terms, and plan structures on demand.

Repeatable workflows

Turn the things done every week into routines the assistant runs the same way, every time.

The assistant supports research, preparation, and follow-up. It does not give financial advice. Recommendations to clients remain the agent's own, under professional judgment and the firm's compliance processes.

HOW ACCESS WORKS

Four steps, reviewed personally.

I Apply

The agent completes a short private application on the website: who they are, their agency, and why they want access. About two minutes.

II Approval

An administrator reviews each application individually and approves or declines. Approval is deliberate; it is not automatic.

III Claim the assistant

Approved agents receive a secure, single-use private link to connect their Telegram account and claim their assistant.

IV Start in Telegram

The agent opens Telegram and starts working. No installs, no dashboards, no manuals.

Why access is private

Privacy here is the architecture, not a label. Every agent is individually approved; each assistant serves one agent alone; access runs through the agent's own approved Telegram account; and daily allowances keep every member's assistant fast and protected.

WHAT HAS BEEN BUILT

A complete, working platform.

The full front-to-back experience is live today, from the first impression to the administrator's review desk.

Premium landing site

A prestige, mobile-first website that presents the offering and invites qualified agents to apply.

Application funnel

A real application form that validates, stores each submission, and confirms with a reference code.

Administrator dashboard

Where approved staff review applications and approve or decline, plus users, documents, compliance, and usage.

The AI assistant

An isolated per-agent assistant in Telegram, backed by a private knowledge base of Prudential product material.

Compliance guardrail

Automated checks flag non-compliant insurance messaging for review before it reaches a client.

Director alerts

Every new application notifies the director instantly, so nothing waits unseen.

100 messages / day
Starter allowance

36 product documents
in the knowledge base

BUILT TO A PROFESSIONAL STANDARD

Secure, private, and reliable.

Because agents hand over their name, agency, and details, and because this is a regulated profession, the platform is built to be accountable, not just functional.

- **Encrypted throughout.** The site runs over HTTPS with a valid certificate: a genuine padlock in the browser.
- **Isolated by design.** Each agent's assistant, workspace, and data are separated from every other agent's.
- **PDPA-aware.** A clear privacy notice explains what is collected, why, and how long it is kept; consent is explicit and unbundled.
- **Independently security-reviewed.** The platform passed repeated automated security reviews; every issue found was fixed and verified.
- **Compliance guardrails.** Client-facing AI output is checked against prohibited-messaging rules before it goes out.
- **Resilient operations.** Services restart automatically and survive reboots; the database is backed up daily.

Applicant details are never shared with other agents. The service will only ever contact applicants from an official address, and never asks for a password or payment by message.

WHAT COMES NEXT

Ready today, with room to grow.

The platform is presentation-ready now. A short list of enhancements will take it from a strong launch to a fully automated service.

Automated onboarding

Approval automatically issues the secure Telegram link and provisions the agent's assistant, replacing any manual step.

Plans & billing

Each agent subscribes to a plan; usage is metered against their allowance, with billing handled through the platform.

Brand finishing

Registered entity details, official support and privacy contacts, and a custom domain: the final marks of a live, named service.

Confirmation & decision emails

Branded application-received and approval or decline emails, sent from the official domain.

Each item builds on a platform that already works end to end today. None is required for launch; together they complete a fully automated, self-service experience.

A private advantage, ready to open.

The platform is live and working end to end. When you are
ready, the door opens with a single application.
